### 内容摘要

#### 对初学Linux的爱好者忠告

玩Linux最忌reboot（重新启动）这是windows玩家坏习惯

Linux只要接上电源你就不要再想用reboot,shutdown,halt,poweroff命令,Linux系统和应用软件一般备有reload,reconfigure,restart/start/stop...不需要安装软件或配置服务器后使用reboot重新引导计算机

在Linux系统里SIGHUP信号被定义为刷新配置文件,有些程序没有提供reload参数,你可以给进程发送HUP信号,让它刷新配置文件,而不用restart.通过 pkill,killall,kill 都可以发送HUP信号例如: pkill -HUP httpd

下面是我多年积累下来的经验总结，整理成文档供大家参考:

## 1. 内容简介

当前文档档容比较杂，涉及内容广泛。

慢慢我会将其中章节拆成新文档.

文档内容简介:

1. Network
2. Security
3. Web Application
4. Database
5. Storage And Backup/Restore
6. Cluster
7. Developer

### 1.1. Audience(读者对象)

This book is intended primarily for Linux system administrators who are familiar with the following activities:

Audience

1. Linux system administration procedures, including kernel configuration
2. Installation and configuration of cluster, such as load balancing, High Availability,
3. Installation and configuration of shared storage networks, such as Fibre Channel SANs
4. Installation and configuration of web server, such as apache, nginx, lighttpd, tomcat/resin ...

本文档的读者对象:

文档面向有所有读者。您可以选读您所需要的章节,无需全篇阅读,因为有些章节不一定对你有帮助,用得着就翻来看看,暂时用不到的可以不看.

大体分来读者可以分为几类:

1. 架构工程师
2. 系统管理员
3. 系统支持,部署工程师

不管是谁,做什么的,我希望通过阅读这篇文档都能对你有所帮助。

## 1.2. 写给读者

欢迎提出宝贵的建议,如有问题请到 [邮件列表](#) 讨论

为什么写这篇文章

有很多想法,工作中也用不到所以未能实现,所以想写出来,和大家分享.有一点写一点,写得也不好,只要能看懂就行,就当学习笔记了.

开始零零碎碎写过一些文档,也向维基百科供过稿,但维基经常被ZF封锁,后来发现sf.net可以提供主机存放文档,便做了迁移。并开始了我的写作生涯。

这篇文档是作者8年来对工作的总结,是作者一点一滴的积累起来的,有些笔记已经丢失,所以并不完整。

因为工作太忙整理比较缓慢。目前的工作涉及面比较窄所以新文档比较少。

我现在花在技术上的时间越来越少,兴趣转向摄影,无线电。也想写写摄影方面的心得体会。

写作动力:

曾经在网上看到外国开源界对中国的评价,中国人对开源索取无度,但贡献却微乎其微.这句话一直记在我心中,发誓要为中国开源事业做我仅有的一点微薄贡献

另外写文档也是知识积累,还可以增加在圈内的影响力.

人跟动物的不同,就是人类可以把自己学习的经验教给下一代人.下一代在上一代的基础上再创新,不断积累才有今天.

所以我把自己的经验写出来,可以让经验传承

没有内容的章节:

目前我自己一人维护所有文档,写作时间有限,当我发现一个好主题就会加入到文档中,待我有时间再完善章节,所以你会发现很多章节是空无内容的.

文档目前几乎是流水帐式的写作,维护量很大,先将就着看吧.

我想到哪写到哪,你会发现文章没一个中心,今天这里写点,明天跳过本章写其它的.

文中例子绝对多,对喜欢复制然后粘贴朋友很有用,不用动手写,也省时间.

理论的东西,网上大把,我这里就不写了,需要可以去网上查.

我爱写错别字,还有一些是打错的,如果发现请指正.

文中大部分试验是在Debian/Ubuntu/Redhat AS上完成.

## 1.3. 获得文档

### 1.3.1. PDF

[Download PDF Document](#) 下载PDF文档1

[Download PDF Document](#) 下载PDF文档2

### 1.3.2. EPUB

## 2. 作者简介

主页地址: <http://netkiller.sourceforge.net>, <http://netkiller.github.com/>

陈景峰 (ネッカリムシム)

Nickname: netkiller | English name: Neo chen | Nippon name: ちんけいほう (音訳) | Korean name: | Thailand name:

IT民工, UNIX like Evangelist, 业余无线电爱好者 (呼号: BG7NYT), 户外运动以及摄影爱好者。

《PostgreSQL实用实例参考》, 《Postfix 完整解决方案》, 《Netkiller Linux 手札》的作者

2001年来深圳进城打工,成为一名外来务工者.

2002年我发现不能埋头苦干,埋头搞技术是不对的,还要学会"做人".

2003年这年最惨,公司拖欠工资16000元,打过两次官司2005才付清.

2004年开始加入 [分布式计算](#) 团队, [目前成绩](#)

2004-10月开始玩户外和摄影

2005-6月成为中国无线电运动协会会员

2006年单身生活了这么多年,终于找到归宿.

2007物价上涨,金融危机,休息了4个月 (其实是找不到工作)

2008终于找到英文学习方法, , 《Netkiller Developer 手札》, 《Netkiller Document 手札》

2008-8-8 08:08:08 结婚,后全家迁居湖南省常德市

2009 《Netkiller Database 手札》,年底拿到C1驾照

2010对电子打击乐产生兴趣,计划学习爵士鼓

2011 职业生涯路上继续打怪升级

# 第 1 章 Introduction

目录

- [1. Distribution Version](#)
- [2. Distribution information](#)
- [3. Linux Installation](#)
- [3.1. HDD Partition](#)

## 1. Distribution Version

Debian/Ubuntu

<http://www.ubuntu.com>

Gentoo

<http://www.gentoo.org/>

Scientific Linux (SL)

<http://www.scientificlinux.org/>

CentOS

<http://www.centos.org/>

Debian/Ubuntu适合做实验，快速安装定制，Gentoo适合DIY

如果是企业服务器还是建议使用CentOS，Scientific Linux

## 2. Distribution information

To find your Ubuntu version: `lsb_release -a`

```
[root@localhost ~]# lsb_release -a
LSB Version:      :core-3.1-ia32:core-3.1-noarch:graphics-3.1-ia32:graphics-3.1-noarch
Distributor ID:  CentOS
Description:     CentOS release 5.2 (Final)
Release:         5.2
Codename:        Final

neo@netkiller:~$ lsb_release -a

No LSB modules are available.
Distributor ID:  Ubuntu
Description:     Ubuntu 8.04.1
Release:         8.04
Codename:        hardy
```

```
$ head -n1 /etc/issue
Ubuntu 10.04 LTS \n \l
```

### 3. Linux Installation

#### 3.1. HDD Partition

partition

表 1.1. Linux partition

## 第 2 章 Kernel

```
wget -q -c http://www.kernel.org/pub/linux/kernel/v3.0/linux-3.0.1.tar.bz2
tar jxvf linux-3.0.1.tar.bz2

cd linux-3.0.1
make clean
make mrproper
make menuconfig
make
make modules_install
make install
```

# 第 3 章 System Infomation

目录

[1. Cpu Bit](#)

## 1. Cpu Bit

```
neo@netkiller:~$ uname -a
Linux netkiller 2.6.28-15-server #52-Ubuntu SMP Wed Sep 9 11:34:09 UTC 2009
x86_64 GNU/Linux

neo@netkiller:~$ getconf LONG_BIT
64
```

# 第 4 章 shutdown

```
shutdown -h now
shutdown -h 10:00      10点关机
shutdown -h +10        10mins后关机
shutdown -r now        reboot at once
shutdown -r +30        'System will reboot in 30mins'
shutdown -k            'System will reboot'
```

# 1. dmesg - print or control the kernel ring buffer

dmesg

```
neo@shenzhen:~/doc/Linux/xhtmll$ dmesg
```

2. smartctl - Control and Monitor Utility for SMART Disks

```
# smartctl -i /dev/sda
smartctl version 5.38 [x86_64-redhat-linux-gnu] Copyright (C) 2002-8 Bruce Allen
Home page is http://smartmontools.sourceforge.net/

=== START OF INFORMATION SECTION ===
Model Family:      Western Digital Caviar Second Generation Serial ATA family
Device Model:      WDC WD1600AAJS-75M0A0
Serial Number:     WD-WCAV35616755
Firmware Version:  02.03E02
User Capacity:     160,000,000,000 bytes
Device is:         In smartctl database [for details use: -P show]
ATA Version is:    8
ATA Standard is:   Exact ATA specification draft version not indicated
Local Time is:     Wed May  5 13:05:18 2010 CST
SMART support is:  Available - device has SMART capability.
SMART support is:  Enabled
```

如果 SMART support is: Disabled 使用下面命令启用

```
# smartctl --smart=on --offlineauto=on --saveauto=on /dev/hdb
```

健康情况

```
# smartctl -H /dev/sda
smartctl version 5.38 [x86_64-redhat-linux-gnu] Copyright (C) 2002-8 Bruce Allen
Home page is http://smartmontools.sourceforge.net/

=== START OF READ SMART DATA SECTION ===
SMART overall-health self-assessment test result: PASSED
```

PASSED，这表示硬盘健康状态良好,Failure 最好立刻给服务器更换硬盘

### 3. lspci - list all PCI devices

```
$ lspci

4. dmidecode - DMI table decoder

dmidecode

```
# dmidecode |more

# dmidecode 2.2
SMBIOS 2.4 present.
62 structures occupying 3161 bytes.
Table at 0xCFFBC000.
Handle 0xDA00
    DMI type 218, 11 bytes.
    OEM-specific Type
        Header And Data:
            DA 0B 00 DA B2 00 17 00 0E 20 00
Handle 0x0000
    DMI type 0, 24 bytes.
    BIOS Information
        Vendor: Dell Inc.
        Version: 1.2.0
        Release Date: 10/18/2006
        Address: 0xF0000
        Runtime Size: 64 kB
        ROM Size: 1024 kB
        Characteristics:
            ISA is supported
            PCI is supported
            PNP is supported
            BIOS is upgradeable
            BIOS shadowing is allowed
            ESCD support is available
            Boot from CD is supported
            Selectable boot is supported
            EDD is supported
            Japanese floppy for Toshiba 1.2 MB is supported (int 13h)
            5.25"/360 KB floppy services are supported (int 13h)
            5.25"/1.2 MB floppy services are supported (int 13h)
            3.5"/720 KB floppy services are supported (int 13h)
            Print screen service is supported (int 5h)
            8042 keyboard services are supported (int 9h)
            Serial services are supported (int 14h)
            Printer services are supported (int 17h)
            CGA/mono video services are supported (int 10h)
            ACPI is supported
            USB legacy is supported
            BIOS boot specification is supported
            Function key-initiated network boot is supported
```

## 5. 鉴别eth(x)

简单的方法：  
一个插网线，一个不插，运行 `mii-tool` 或 `ethtool eth0`，看状态是否连接

另一种方法是：  
`tail -f /var/log/messages`，当你向其中一个网口做插拔网线的动作时，屏幕上会看到提示信息

最好的方法是将mac地址写在启动脚本内.

## 6. usb device

lsusb

```
neo@netkiller:~$ lsusb

## 第 7 章 Locale

### 目录

- [1. time zone](#)
- [2. to change system date/time](#)

#### [2.1. NTP Server](#)

#### [3. Language](#)

### 1. time zone

#### 选择用户时区

```
$ tzselect
Please identify a location so that time zone rules can be set correctly.
Please select a continent or ocean.
1) Africa
2) Americas
3) Antarctica
4) Arctic Ocean
5) Asia
6) Atlantic Ocean
7) Australia
8) Europe
9) Indian Ocean
10) Pacific Ocean
11) none - I want to specify the time zone using the Posix TZ format.
#?
```

#### tzconfig

```
netkiller@shenzhen:~$ tzconfig
Your current time zone is set to US/Eastern
Do you want to change that? [n]: y

Please enter the number of the geographic area in which you live:

1) Africa                7) Australia
2) America               8) Europe
3) US time zones         9) Indian Ocean
4) Canada time zones     10) Pacific Ocean
5) Asia                  11) Use System V style time zones
6) Atlantic Ocean        12) None of the above

Then you will be shown a list of cities which represent the time zone
in which they are located. You should choose a city in your time zone.

Number: 5

Aden Almaty Amman Anadyr Aqtau Aqtobe Ashgabat Ashkhabad Baghdad Bahrain
Baku Bangkok Beirut Bishkek Brunei Calcutta Choibalsan Chongqing Chungking
Colombo Dacca Damascus Dhaka Dili Dubai Dushanbe Gaza Harbin Hong_Kong
Hovd Irkutsk Istanbul Jakarta Jayapura Jerusalem Kabul Kamchatka Karachi
Kashgar Katmandu Krasnoyarsk Kuala_Lumpur Kuching Kuwait Macao Macau
Magadan Makassar Manila Muscat Nicosia Novosibirsk Omsk Oral Phnom_Penh
Pontianak Pyongyang Qatar Qyzylorda Rangoon Riyadh Riyadh87 Riyadh88
```

```
Riyadh89 Saigon Sakhalin Samarkand Seoul Shanghai Singapore Taipei
Tashkent Tbilisi Tehran Tel_Aviv Thimbu Thimphu Tokyo Ujung_Pandang
Ulaanbaatar Ulan_Bator Urumqi Vientiane Vladivostok Yakutsk Yekaterinburg
Yerevan
```

```
Please enter the name of one of these cities or zones
You just need to type enough letters to resolve ambiguities
Press Enter to view all of them again
Name: [] Harbin
Your default time zone is set to 'Asia/Harbin'.
Local time is now:      Tue Mar 11 10:46:46 CST 2008.
Universal Time is now:  Tue Mar 11 02:46:46 UTC 2008.
```

tzdata

dpkg-reconfigure tzdata

```
$ sudo dpkg-reconfigure tzdata
```

## 2. to change system date/time

date

e.g. date -s month/day/year

```
# date -s 1/18/2008
```

time

e.g. date -s hour:minute:second

```
# date -s 11:12:00
```

writing CMOS

```
# clock -w
```

### 2.1. NTP Server

更新网络时间

ntpdate - client for setting system time from NTP servers

```
$ sudo ntpdate asia.pool.ntp.org
21 May 10:34:18 ntpdate[6687]: adjust time server 203.185.69.60 offset 0.031079
sec
$ sudo hwclock -w
```

[Home](#) | [Mirror](#) | [Search](#)

### 3. Language

#### 默认语言

```
export LANG=en_US
export LC_ALL=en_US
```

#### 永久更改

```
sudo vi /etc/default/locale

LANG="en_US.UTF-8"
LANGUAGE="en_US:en"
```

#### 改为中文环境

```
sudo apt-get install language-support-zh
LANG="zh_CN.UTF-8"
LANGUAGE="zh_CN:zh"
```

[Home](#) | [Mirror](#) | [Search](#)

# 第 8 章 console / terminal

## 目录

- [1. serial console](#)
- [2. console timeout](#)
- [3. TUI \(Text User Interface\)](#)
- [4. framebuffer](#)

## 1. serial console

gurb

```
$ sudo vim /boot/grub/menu.lst

title                Ubuntu 8.04.1, kernel 2.6.24-21-generic
root                 (hd0,5)
kernel               /boot/vmlinuz-2.6.24-21-generic root=UUID=3d5dd6c0-bbd2-4ddf-
9b71-1c7b78e8de3b ro quiet splash

console=tty0 console=ttyS0,38400
initrd               /boot/initrd.img-2.6.24-21-generic
quiet
```

tty6

```
$ sudo vim /etc/event.d/tty6

respawn
#exec /sbin/getty 38400 tty6
exec /sbin/getty -L /dev/ttyS0 38400 vt100
```

other terminal: VT100, VT220, VT320, VT420

securetty

```
$ cat /etc/securetty
# for people with serial port consoles
ttyS0
```

## 2. console timeout

查看当前的\$TMOUT环境变量设置

```
echo $TMOUT
```

```
TMOUT=3600
```

```
export TMOUT
```

```
netkiller@Linux-server:~$ sudo dpkg-reconfigure en_US.UTF-8
```

### 3. TUI (Text User Interface)

SVGATextMode

```
$ sudo apt-get install svgatextmode
$ SVGATextMode 80x25x9
```

## 4. framebuffer

在grub.conf中的kernel行后面写上vga=0x317就行了，也可以用vga=ask，让系统启动的时候询问你用多大的分辨率

> ../../sda7
lrwxrwxrwx 1 root root 10 2009-07-11 00:52 cc2c1be9-a6e0-4494-a5f0-76b39d3fc1f0 -
```

```
> ../../sda5
```

[上一页](#)  
4. framebuffer

[上一级](#)  
[起始页](#)

[下一页](#)  
2. Label

## 2. Label

### 2.1. Ext2

e2label - Change the label on an ext2/ext3 filesystem

#### 2.1.1. 查看卷标

```
# e2label /dev/sda1
/boot
```

#### 2.1.2. 更改卷标

```
# man e2label
# e2label /dev/sda5 /www

# e2label /dev/sda5
/www
```

测试

```
# mount /app
```

### 3. 临时增加 swap 分区

```
dd if=/dev/zero of=/root/swap0 bs=1M count=2048
mkswap /root/swap0
swapon /root/swap0
```

4. Show partition

show all of disk and partition

```
neo@master:~$ sudo sfdisk -s
/dev/sda: 8388608
/dev/sdb: 2097152
total: 10485760 blocks
```

or

```
neo@master:~$ sudo fdisk -l

Disk /dev/sda: 8589 MB, 8589934592 bytes
255 heads, 63 sectors/track, 1044 cylinders
Units = cylinders of 16065 * 512 = 8225280 bytes
Disk identifier: 0x000301bd

   Device Boot      Start         End      Blocks   Id  System
/dev/sda1  *           1           993     7976241   83   Linux
/dev/sda2                994        1044     409657+    5   Extended
/dev/sda5                994        1044     409626    82   Linux swap / Solaris

Disk /dev/sdb: 2147 MB, 2147483648 bytes
255 heads, 63 sectors/track, 261 cylinders
Units = cylinders of 16065 * 512 = 8225280 bytes
Disk identifier: 0x00000000

Disk /dev/sdb doesn't contain a valid partition table
neo@master:~$
```

show partition /dev/sda

```
neo@master:~$ sudo fdisk -l /dev/sda

Disk /dev/sda: 8589 MB, 8589934592 bytes
255 heads, 63 sectors/track, 1044 cylinders
Units = cylinders of 16065 * 512 = 8225280 bytes
Disk identifier: 0x000301bd

   Device Boot      Start         End      Blocks   Id  System
/dev/sda1  *           1           993     7976241   83   Linux
/dev/sda2                994        1044     409657+    5   Extended
/dev/sda5                994        1044     409626    82   Linux swap / Solaris
neo@master:~$
```

5. Create partition

```
$ sudo cfdisk /dev/sdb

Command (m for help): p

Disk /dev/sda: 146.1 GB, 146163105792 bytes
255 heads, 63 sectors/track, 17769 cylinders
Units = cylinders of 16065 * 512 = 8225280 bytes

   Device Boot      Start         End      Blocks   Id  System
/dev/sda1    *           1           25       200781   83   Linux
/dev/sda2                26        3849       30716280   83   Linux
/dev/sda3          3850       17769      111812400   83   Linux

Command (m for help): d
Partition number (1-4): 3

Command (m for help): n
Command action
   e   extended
   p   primary partition (1-4)
p
Partition number (1-4): 3
First cylinder (3850-17769, default 3850):
Using default value 3850
Last cylinder or +size or +sizeM or +sizeK (3850-17769, default 17769): +32000M

Command (m for help): p

Disk /dev/sda: 146.1 GB, 146163105792 bytes
255 heads, 63 sectors/track, 17769 cylinders
Units = cylinders of 16065 * 512 = 8225280 bytes

   Device Boot      Start         End      Blocks   Id  System
/dev/sda1    *           1           25       200781   83   Linux
/dev/sda2                26        3849       30716280   83   Linux
/dev/sda3          3850        7740      31254457+   83   Linux
```

## 6. Clone partition

/dev/sda 克隆到 /dev/sdb

```
$ sudo dd if=/dev/sda of=/dev/sdb
```

备份 mbr 主引导记录

```
$ dd if=/dev/sda of=/root/disk.mbr bs=512 count=1
```

```
$ dd if=/root/disk.mbr of=/dev/sda bs=512 count=1
```

软盘镜像

```
$ dd if=/dev/fd0 of=floppy.img bs=1440k
```

## 7. Format partition

format /dev/sdb1

### 7.1. ext3

```
neo@master:~$ sudo mkfs.ext3 /dev/sdb1
```

### 7.2. ReiserFS

you also can using other file system

reiserfs

```
neo@master:~$ sudo mkfs.reiserfs /dev/sdb1
```

8. estimate disk / directory / file space usage

total for a directory

```
du -h --max-depth=0
```

## 9. Convert from ext3 to ext4 File system

step 1

```
$ sudo tune2fs -O extents,uninit_bg,dir_index /dev/sda7
tune2fs 1.41.4 (27-Jan-2009)

Please run e2fsck on the filesystem.
```

step 2

```
$ sudo e2fsck -fD /dev/sda7
e2fsck 1.41.4 (27-Jan-2009)
/dev/sda7 is mounted.

WARNING!!! Running e2fsck on a mounted filesystem may cause
SEVERE filesystem damage.

Do you really want to continue (y/n)? yes

/dev/sda7: recovering journal
Pass 1: Checking inodes, blocks, and sizes
Pass 2: Checking directory structure
Pass 3: Checking directory connectivity
Pass 3A: Optimizing directories
Pass 4: Checking reference counts
Pass 5: Checking group summary information
Block bitmap differences: -3913734 +3925302
Fix<y>? yes

/dev/sda7: ***** FILE SYSTEM WAS MODIFIED *****
/dev/sda7: 77282/2293760 files (15.7% non-contiguous), 4584313/9163066 blocks
```

step 3

```
$ sudo cp /etc/fstab /etc/fstab.old
$ sudo vim /etc/fstab

# /dev/sda7
UUID=16089544-6fbf-400e-a63a-fa6159e271e5 /home ext4
relatime,errors=remount-ro 0 1
```

step 4

```
$ sudo reboot
```

## 10. GPT

```
$ sudo parted /dev/sda
GNU Parted 2.3
Using /dev/sda
Welcome to GNU Parted! Type 'help' to view a list of commands.
(parted)
```

### 10.1. 查看分区

```
(parted) print
Model: DELL PERC 6/i (scsi)
Disk /dev/sda: 2498GB
Sector size (logical/physical): 512B/512B
Partition Table: gpt

Number  Start   End     Size    File system  Name      Flags
 1      1049kB  50.0GB  50.0GB  ext4          boot
 2      50.0GB  66.0GB  16.0GB  linux-swap(v1)
 3      66.0GB  2498GB  2432GB  ext4          /backup
```

空闲空间

```
(parted) print free
Model: DELL PERC 6/i (scsi)
Disk /dev/sda: 2498GB
Sector size (logical/physical): 512B/512B
Partition Table: gpt

Number  Start   End     Size    File system  Name      Flags
 1      17.4kB  1049kB  1031kB  Free Space
 2      1049kB  50.0GB  50.0GB  ext4          boot
 3      50.0GB  66.0GB  16.0GB  linux-swap(v1)
 4      66.0GB  2498GB  2432GB  ext4          /backup
 5      2498GB  2498GB  1032kB  Free Space
```

### 10.2. 创建分区

```
(parted) mkpart
Partition name? []? /www
File system type? [ext2]?
Start? 10GB
End? 50GB
```

#### 例 9.1. GPT Example

```
(parted) print devices
/dev/sdb (9999GB)
/dev/sda (2498GB)

(parted) select /dev/sdb
Using /dev/sdb

(parted) mklabel gpt
Warning: The existing disk label on /dev/sdb will be destroyed and all data on
this disk will be
lost. Do you want to continue?
Yes/No? yes
```

```
(parted) mkpart
Partition name? []? /md1200
File system type? [ext2]? ext4
Start? 0GB
End? 9999GB

(parted) print list
Model: DELL PERC H800 (scsi)
Disk /dev/sdb: 9999GB
Sector size (logical/physical): 512B/512B
Partition Table: gpt

Number  Start      End          Size         File system  Name        Flags
  1      1049kB     9999GB       9999GB                /md1200

Model: DELL PERC 6/i (scsi)
Disk /dev/sda: 2498GB
Sector size (logical/physical): 512B/512B
Partition Table: gpt

Number  Start      End          Size         File system  Name        Flags
  1      1049kB     50.0GB       50.0GB       ext4          boot
  2      50.0GB     66.0GB       16.0GB       linux-swap(v1)
  3      66.0GB     2498GB       2432GB       ext4          /backup

(parted)
```

10.3. 退出

```
(parted) quit
```

10.4. mount

```
neo@backup:~$ sudo blkid
[sudo] password for neo:
/dev/sda1: UUID="2fc411ec-9f6e-4e04-9270-11d23a9b0668" TYPE="ext4"
/dev/sda2: UUID="f5175b7a-4c87-471c-ab9f-9d601bc5e6e2" TYPE="swap"
/dev/sda3: UUID="3217bdd9-1beb-494a-a428-8d1c09eaalaf" TYPE="ext4"

neo@backup:~$ sudo vim /etc/fstab
UUID=3217bdd9-1beb-494a-a428-8d1c09eaalaf /backup ext4 errors=remount-ro 0
1
```

## 11. loop devices

If you are using the loadable module you must have the module loaded first with the command:

```
$ sudo modprobe loop
```

The following commands can be used as an example of using the loop device.

```
$ dd if=/dev/zero of=file bs=1k count=100
100+0 records in
100+0 records out
102400 bytes (102 kB) copied, 0.00126554 s, 80.9 MB/s

$ sudo losetup /dev/loop0 file

$ sudo mkfs.ext3 /dev/loop0
mke2fs 1.40.8 (13-Mar-2008)
Filesystem label=
OS type: Linux
Block size=1024 (log=0)
Fragment size=1024 (log=0)
16 inodes, 100 blocks
5 blocks (5.00%) reserved for the super user
First data block=1
1 block group
8192 blocks per group, 8192 fragments per group
16 inodes per group

Writing inode tables: done

Filesystem too small for a journal
Writing superblocks and filesystem accounting information: done

This filesystem will be automatically checked every 24 mounts or
180 days, whichever comes first. Use tune2fs -c or -i to override.
```

mount loop device

```
$ sudo mkdir /mnt/loop
$ sudo mount /dev/loop0 /mnt/loop
```

Now! you can using it as harddisk.

umount loop device

```
$ sudo umount /mnt/loop/
$ sudo losetup -d /dev/loop0
```

Maybe also encryption modules are needed.

```
$ sudo modprobe cryptoloop
$ sudo modprobe des
```

enable data encryption

```
$ dd if=/dev/zero of=encryption_file bs=1k count=100
100+0 records in
100+0 records out
```

```
102400 bytes (102 kB) copied, 0.00130537 s, 78.4 MB/s
```

```
$ sudo losetup -e des /dev/loop0 encryption_file
```

If you are using the loadable module you may remove the module with the command

```
$ sudo rmmod loop des cryptoloop
```

### 11.1. losetup - set up and control loop devices

#### EXAMPLE

If you are using the loadable module you must have the module loaded first with the command

```
# insmod loop.o
```

Maybe also encryption modules are needed.

```
# insmod des.o # insmod cryptoloop.o
```

The following commands can be used as an example of using the loop device.

```
# dd if=/dev/zero of=/file bs=1k count=100
```

```
# losetup -e des /dev/loop0 /file
```

```
Password:
```

```
Init (up to 16 hex digits):
```

```
# mkfs -t ext2 /dev/loop0 100
```

```
# mount -t ext2 /dev/loop0 /mnt
```

```
...
```

```
# umount /dev/loop0
```

```
# losetup -d /dev/loop0
```

If you are using the loadable module you may remove the module with the command

```
# rmmod loop
```

# 第 10 章 Removable Storage

## 目录

- [1. usb flash](#)
- [2. CD / DVD](#)

- [2.1. Mount an ISO file](#)
- [2.2. create iso file from CD](#)
- [2.3. burner](#)
- [2.4. ISO Mirror](#)

eject - eject removable media

```
$ eject
```

## 1. usb flash

mount NTFS filesystem

```
sudo mount -t ntfs-3g /dev/sdb1 /mnt/usbflash/ -o force
```

## 2. CD / DVD

### 2.1. Mount an ISO file

To mount the ISO image file.iso to the mount point /media/cdrom use this :

```
$ mount -o loop -t iso9660 file.iso /media/cdrom
```

### 2.2. create iso file from CD

```
$ dd if=/dev/cdrom of=isofile.iso
```

### 2.3. burner

### 2.4. ISO Mirror

```
$ mkisofs -V LABEL -r /mnt/cdrom | gzip > cdrom.iso.gz
```

mount iso file

```
$ mount -t iso9660 -o loop cdrom.iso /mnt/cdrom
```

# 第 11 章 File System

## 目录

### [1. Mount partition](#)

- [1.1. Mount](#)
- [1.2. Umount](#)
- [1.3. bind directory](#)
- [1.4. /etc/fstab](#)

### [2. RAM FS](#)

### [3. tmpfs](#)

### [4. ftp fs](#)

### [5. SSHFS \(sshfs - filesystem client based on SSH File Transfer Protocol\)](#)

## 1. Mount partition

### 1.1. Mount

```
sudo mount /dev/sdb1 /mnt/mount1
```

支持UTF-8

```
mount -o iocharset=utf8 /dev/sda5 /mnt/usb
```

### 1.2. Umount

umount - unmount file systems

```
sudo umount /mnt/mount1
```

### 1.3. bind directory

```
mount --bind /foo /home/neo/foo
```

挂载目录将不能被删除，但目录下文件可以删除

```
# rm -rf /home/neo/foo
rm: cannot remove directory '/home/neo/foo': Device or resource busy
```

/etc/fstab

```
/foo /home/neo/foo    none    bind    0 0
```

### 1.4. /etc/fstab

```
# <file system> <mount point>    <type>    <options>          <dump>    <pass>
```

mount point

该字段描述希望的文件系统加载的目录，对于swap设备，该字段为none

file system

例如/dev/cdrom或/dev/sdb,除了使用设备名，你可以使用设备的UUID或设备的卷标签，例如，LABAL=root 或 UUID=7f91104e-8187-4ccf-8215-6e2e641f32e3

type

定义了该设备上的文件系统,系统可用文件系统

```
$ cat /proc/filesystems
nodev    sysfs
nodev    rootfs
nodev    bdev
nodev    proc
nodev    cgroup
nodev    cpuset
nodev    tmpfs
nodev    devtmpfs
nodev    debugfs
nodev    securityfs
nodev    sockfs
nodev    pipefs
nodev    anon_inodefs
nodev    inotifyfs
nodev    devpts
        ext3
        ext2
        ext4
nodev    ramfs
nodev    hugetlbfs
nodev    ecryptfs
nodev    fuse
        fuseblk
nodev    fusectl
nodev    mqueue
nodev    rpc_pipefs
nodev    nfs
nodev    nfs4
        reiserfs
        xfs
        jfs
        msdos
        vfat
        ntfs
        minix
        hfs
        hfsplus
        qnx4
        ufs
        btrfs
        iso9660
```

options

选项	含义
ro	以只读模式加载该文件系统
sync	不对该设备的写操作进行缓冲处理，这可以防止在非正常关机时情况下破坏文件系统，但是却降低了计算机速度
user	允许普通用户加载该文件系统
quota	强制在该文件系统上进行磁盘定额限制
noauto	不再使用mount -a命令（例如系统启动时）加载该文件系统
noatime/nodiratime	禁止更新访问时间

dump

dump - 该选项被"dump"命令使用来检查一个文件系统应该以多快频率进行转储，若不需要转储就设置该字段

为0

pass

该字段被fsck命令用来决定在启动时需要被扫描的文件系统的顺序，根文件系统"/"对应该字段的值应该为1，其他文件系统应该为2。若该文件系统无需在启动时扫描则设置该字段为0

noatime/nodiratime

```
/dev/sda2 /data ext3 defaults 0 2
/dev/sda2 /data ext3 defaults,noatime,nodiratime 0 2
```

```
mount -o remount /data
mount -o noatime -o nodiratime -o remount /data
```

## 2. RAM FS

```
# mkdir -p /mnt/ram1
# mount -t ramfs none /mnt/ram1 -o maxsize=10000
```

### 3. tmpfs

```
# mkdir -p /mnt/tmpfs
# mount tmpfs /mnt/tmpfs -t tmpfs
# mount tmpfs /mnt/tmpfs -t tmpfs -o size=32m
```

## 4. ftp fs

### 安装

```
sudo apt-get install curlftpfs
```

### 挂载

```
sudo curlftpfs ftp://username:password@172.16.0.1 /mnt/ftp
```

### 卸载

```
sudo fusermount -u /mnt/ftp
```

### 权限设置

```
sudo curlftpfs -o rw,allow_other,uid=500,gid=500 ftp://neo:chen@172.16.1.1 /mnt/ftp
sudo curlftpfs ftp://host/sub_dir mount_point -o user="ftp_username:ftp_password", uid=user_id, gid=group_id, allow_other
```

### fstab 开机自动挂载

```
sudo echo "curlftpfs#username:password@172.16.0.1 /mnt/ftp fuse allow_other,uid=userid,gid=groupid 0 0" >> /etc/fstab
```

5. SSHFS (sshfs - filesystem client based on SSH File Transfer Protocol)

```
$ sudo apt-get install sshfs
$ sudo sshfs root@172.16.0.5:/home/neo /mnt
$ sudo fusermount -u /mnt
```

# 第 12 章 Networking

## 目录

### [1. Hostname](#)

- [1.1. /etc/hostname](#)
- [1.2. /etc/host.conf](#)
- [1.3. /etc/hosts](#)
- [1.4. hosts.allow / hosts.deny](#)
- [1.5. /etc/resolv.conf](#)

### [2. Network adapter](#)

### [3. Ethernet Interfaces](#)

- [3.1. ifquery](#)
- [3.2. DHCP](#)
- [3.3. Static IP](#)

### [4. Mask](#)

### [5. Gateway](#)

### [6. Configuring Name Server Lookups](#)

### [7. sysctl](#)

### [8. bonding](#)

#### [8.1. Ubuntu](#)

### [9. Finding optimal MTU](#)

## 1. Hostname

### 1.1. /etc/hostname

```
# cat /etc/hostname
web1.example.com
```

### 1.2. /etc/host.conf

解析顺序配置文件

```
[root@development bin]# cat /etc/host.conf
order hosts,bind
```

首先在/etc/hosts文件中寻找，如果不存在，再去DNS服务器中寻找

### 1.3. /etc/hosts

IP地址后面TAB符，然后写主机地址

```
127.0.0.1      localhost.localdomain localhost
::1           localhost6.localdomain6 localhost6
192.168.1.10   development.example.com development
```

### 1.4. hosts.allow / hosts.deny

/etc/hosts.allow 和 /etc/hosts.deny  
许可IP／禁止IP，相当于黑白名单

1.5. /etc/resolv.conf

```
search example.com
nameserver 208.67.222.222
nameserver 208.67.220.220
```

## 2. Network adapter

ethtool eth1

```
neo@shenzhen:~/doc/Linux/xhtml$ sudo ethtool eth1
Settings for eth1:
    Supported ports: [ TP MII ]
    Supported link modes:   10baseT/Half 10baseT/Full
                           100baseT/Half 100baseT/Full
    Supports auto-negotiation: Yes
    Advertised link modes:  10baseT/Half 10baseT/Full
                           100baseT/Half 100baseT/Full
    Advertised auto-negotiation: Yes
    Speed: 100Mb/s
    Duplex: Full
    Port: MII
    PHYAD: 32
    Transceiver: internal
    Auto-negotiation: on
    Supports Wake-on: pumbg
    Wake-on: d
    Current message level: 0x00000007 (7)
    Link detected: yes
```

mii-tool

```
neo@shenzhen:~/doc/Linux/xhtml$ sudo mii-tool
eth1: negotiated 100baseTx-FD, link ok
```

### 3. Ethernet Interfaces

restart

```
sudo /etc/init.d/networking restart
```

#### 3.1. ifquery

```
$ sudo ifquery --list
lo
eth0
eth1
```

#### 3.2. DHCP

DHCP

```
sudo vi /etc/network/interfaces

# The primary network interface - use DHCP to find our address
auto eth0
iface eth0 inet dhcp
```

#### 3.3. Static IP

Static IP

```
# The primary network interface
auto eth0
iface eth0 inet static
address 192.168.3.90
gateway 192.168.3.1
netmask 255.255.255.0
network 192.168.3.0
broadcast 192.168.3.255
```

Setting up Second IP address or Virtual IP address in Ubuntu

```
sudo vi /etc/network/interfaces

auto eth0:1
iface eth0:1 inet static
address 192.168.1.60
netmask 255.255.255.0
network x.x.x.x
broadcast x.x.x.x
gateway x.x.x.x
```

4. Mask

举例说明该算法。  
例：给定一 class c address : 192.168.5.0 ，要求划分20个子网，每个子网5个主机。  
解：因为 $4 < 5 < 8$ ，用 $256 - 8 = 248$  ---->即是所求的子网掩码，对应的子网数也就出来了。这是针对C类地址。  
针对B类地址的做法。对于B类地址，假如主机数小于或等于254，与C类地址算法相同。对于主机数大于254的，如需主机 700台，50个子网（相当大了）， $512 < 700 < 1024$   
 $256 - (1024/256) = 256 - 4 = 252$  ---->即是所求的子网掩码，对应的子网数也就出来了。上面 $256 - 4$ 中的4（2的2次幂）是指主机数用2进制表示时超过8位的位数，即超过2位，掩码为剩余的前6位，即子网数为 $2^6 - 2 = 62$ 个。

Append :Host/Subnet Quantities Table			
Class A # bits	Mask	Effective Subnets	Effective Hosts
2	255.192.0.0	2	4194302
3	255.224.0.0	6	2097150
4	255.240.0.0	14	1048574
5	255.248.0.0	30	524286
6	255.252.0.0	62	262142
7	255.254.0.0	126	131070
8	255.255.0.0	254	65536
9	255.255.128.0	510	32766
10	255.255.192.0	1022	16382
11	255.255.224.0	2046	8190
12	255.255.240.0	4094	4094
13	255.255.248.0	8190	2046
14	255.255.252.0	16382	1022
15	255.255.254.0	32766	510
16	255.255.255.0	65536	254
17	255.255.255.128	131070	126
18	255.255.255.192	262142	62
19	255.255.255.224	524286	30
20	255.255.255.240	1048574	14
21	255.255.255.248	2097150	6
22	255.255.255.252	4194302	2

13	255.255.255.248	8190	6
14	255.255.255.252	16382	2
Class C # bits	Mask	Effective Subnets	Effective Hosts
2	255.255.255.192	2	62
3	255.255.255.224	6	30
4	255.255.255.240	14	14
5	255.255.255.248	30	6

6	255.255.255.252	62	2
*Subnet all zeroes and all ones excluded. *Host all zeroes and all ones excluded.			

## 5. Gateway

default gateway

```
$ sudo route add default gw 172.16.0.1
```

```
$ sudo ip route default via 172.16.0.1 dev eth0
```

## 6. Configuring Name Server Lookups

### Setting up DNS

```
When it comes to DNS setup Ubuntu doesn't differ from other distributions. You
can add hostname and IP addresses to the file /etc/hosts for static lookups.

To cause your machine to consult with a particular server for name lookups you
simply add their addresses to /etc/resolv.conf.

For example a machine which should perform lookups from the DNS server at IP
address 192.168.3.2 would have a resolv.conf file looking like this

sudo vi /etc/resolv.conf

enter the following details

search test.com
nameserver 192.168.3.2

domain domain.com
search www.domain.com domain.com
nameserver 202.96.128.86
nameserver 202.96.134.133
```

## 7. sysctl

enable IP forwarding

```
neo@shenzhen:~$ sysctl net.ipv4.ip_forward
net.ipv4.ip_forward = 1
```

```
# enable IP forwarding
echo 1 > /proc/sys/net/ipv4/ip_forward
```

ubuntu

```
sysctl -w net.ipv4.ip_forward=1
```

[Home](#) | [Mirror](#) | [Search](#)

Google™ Custom Search

## 8. bonding

绑定的前提条件：芯片组型号相同，而且网卡应该具备自己独立的BIOS芯片。

# vi ifcfg-bond0

```
# cat ifcfg-bond0
DEVICE=bond0
BOOTPROTO=static
IPADDR=172.16.0.1
NETMASK=255.255.252.0
BROADCAST=172.16.3.254
ONBOOT=yes
TYPE=Ethernet
```

这里要注意，不要指定单个网卡的IP地址、子网掩码。将上述信息指定到虚拟适配器(bonding)中即可

```
[root@rhas-13 network-scripts]# cat ifcfg-eth0
DEVICE=eth0
ONBOOT=yes
BOOTPROTO=dhcp

[root@rhas-13 network-scripts]# cat ifcfg-eth1
DEVICE=eth1
ONBOOT=yes
BOOTPROTO=dhcp
```

编辑 /etc/modules.conf 文件，加入如下一行内容，以使系统在启动时加载bonding模块，对外虚拟网络接口设备为 bond0.加入下列两行：

\* /etc/modules.conf 文件已经不再使用

```
cat >> /etc/modprobe.d/bonding.conf <<EOF
alias bond0 bonding
options bond0 miimon=100 mode=1
EOF
```

说明：miimon是用来进行链路监测的。比如:miimon=100，那么系统每100ms监测一次链路连接状态，如果有一条线路不通就转入另一条线路；mode的值表示工作模式，他共有0，1,2,3四种模式，常用的为0,1两种。mode=0表示load balancing (round-robin)为负载均衡方式，两块网卡都工作。mode=1表示fault-tolerance (active-backup)提供冗余功能，工作方式是主备的工作方式,也就是说默认情况下只有一块网卡工作,另一块做备份。bonding只能提供链路监测，即从主机到交换机的链路是否接通。如果只是交换机对外的链路down掉了，而交换机本身并没有故障，那么bonding会认为链路没有问题而继续使用。

# vi /etc/rc.d/rc.local

```
ifenslave bond0 eth0 eth1
route add -net 172.31.3.254 netmask 255.255.255.0 bond0
```

到这时已经配置完毕 重新启动机器。重启会看见以下信息就表示配置成功了

```
.....
Bringing up interface bond0 OK
Bringing up interface eth0 OK
```

```
Bringing up interface eth1 OK
.....
```

mode=1工作在主备模式下,这时eth1作为备份网卡是no arp的 [root@rhas-13 network-scripts]# ifconfig 验证网卡的配置信息

那也就是说在主备模式下,当一个网络接口失效时(例如主交换机掉电等),不回出现网络中断, 系统会按照cat /etc/rc.d/rc.local里指定网卡的顺序工作,机器仍能对外服务,起到了失效保护的功能。在mode=0 负载均衡工作模式,他能提供两倍的带宽,下面我们来看一下网卡的配置信息:

在这种情况下出现一块网卡失效,仅仅会是服务器出口带宽下降,也不会影响网络使用。通过查看bond0的工作状态查询能详细的掌握bonding的工作状态

Linux下通过网卡绑定技术既增加了服务器的可靠性,又增加了可用网络带宽,为用户提供不间断的关键服务。

8.1. Ubuntu

ifenslave

```
apt-get install ifenslave-2.6
```

/etc/modules

```
bonding
```

modprobe bonding

/etc/modprobe.d/aliases

```
alias bond0 bonding
options bonding mode=0 miimon=100

or

options bonding mode=1 miimon=100 downdelay=200 updelay=200
```

例 12.1. bonding example

/etc/network/interfaces

```
auto lo
iface lo inet loopback

iface eth0 inet dhcp
iface eth1 inet dhcp

auto bond0
iface bond0 inet static
address 172.16.0.1
netmask 255.255.255.0
gateway 172.16.0.254
up ifenslave bond0 eth0 eth1
down ifenslave -d bond0 eth0 eth1
```

# 9. Finding optimal MTU

```
$ ping -c 1 -s $((1500-28)) -M do www.debian.org
PING www.debian.org (140.112.8.139) 1472(1500) bytes of data.
1480 bytes from linux3.cc.ntu.edu.tw (140.112.8.139): icmp_seq=1 ttl=47 time=52.7
ms

--- www.debian.org ping statistics ---
1 packets transmitted, 1 received, 0% packet loss, time 0ms
rtt min/avg/max/mdev = 52.778/52.778/52.778/0.000 ms
```

Try 1454 instead of 1500

# 第 13 章 syslog, klogctl - read and/or clear kernel message ring buffer; set console\_loglevel

## 目录

- [1. /etc/sysconfig/syslog](#)
- [2. /etc/syslog.conf](#)
- [3. logger](#)
- [4. To Log Messages Over UDP Network](#)

## 1. /etc/sysconfig/syslog

enables logging from remote machines

```
# vim /etc/sysconfig/syslog

#SYSLOGD_OPTIONS="-m 0"
SYSLOGD_OPTIONS="-r -m 0"

# /etc/init.d/syslog restart
Shutting down kernel logger:      [ OK ]
Shutting down system logger:      [ OK ]
Starting system logger:            [ OK ]
Starting kernel logger:            [ OK ]
```

## 2. /etc/syslog.conf

```
*.*                                @172.16.0.9
```

所有日志将被重定向到172.16.0.9

```
[root@dev1 test]# service syslog restart
Shutting down kernel logger:           [ OK ]
Shutting down system logger:          [ OK ]
Starting system logger:                [ OK ]
Starting kernel logger:               [ OK ]
[root@dev1 test]#
```

[Home](#) | [Mirror](#) | [Search](#)

### 3. logger

#### 日志的级别

```
emerg 系统已经不可用，级别为紧急
alert 警报，需要立即处理和解决
crit 即将发生，得需要预防。事件就要发生
warnig 警告
err 错误信息，普通的错误信息
notice 提醒信息，很重要的信息
info 通知信息，属于一般信息
debug 这是调试类信息
```

```
#vi /etc/syslog.conf

# Log anything (except mail) of level info or higher.
# Don't log private authentication messages!
*.info;mail.none;authpriv.none;cron.none;local1.none;local3.none /var/log/messages

#my log
local3.* /var/log/my.log
```

```
# service syslog restart
Shutting down kernel logger:           [ OK ]
Shutting down system logger:          [ OK ]
Starting system logger:                [ OK ]
Starting kernel logger:               [ OK ]
```

```
ping 192.168.0.1 | logger -it logger_test -p local3.notice
```

```
# cat /var/log/my.log

4. To Log Messages Over UDP Network

[Home](#) | [Mirror](#) | [Search](#)

# 第 14 章 logrotate - rotates, compresses, and mails system logs

## 目录

[1. /etc/logrotate.conf](#)

[2. /etc/logrotate.d/](#)

[2.1. apache2](#)

[2.2. mysql](#)

[2.3. cacti](#)

logrotate 是linux系统自带的日志分割与压缩程序，通过crontab每日运行一次。

```
$ cat /etc/cron.daily/logrotate
#!/bin/sh

test -x /usr/sbin/logrotate || exit 0
/usr/sbin/logrotate /etc/logrotate.conf
```

## 1. /etc/logrotate.conf

```
$ cat /etc/logrotate.conf
# see "man logrotate" for details
# rotate log files weekly
weekly

# keep 4 weeks worth of backlogs
rotate 4

# create new (empty) log files after rotating old ones
create

# uncomment this if you want your log files compressed
#compress

# packages drop log rotation information into this directory
include /etc/logrotate.d

# no packages own wtmp, or btmp -- we'll rotate them here
/var/log/wtmp {
    missingok
    monthly
    create 0664 root utmp
    rotate 1
}

/var/log/btmp {
    missingok
    monthly
    create 0660 root utmp
    rotate 1
}

# system-specific logs may be configured here
```

[Home](#) | [Mirror](#) | [Search](#)

## 2. /etc/logrotate.d/

### 2.1. apache2

```
$ cat /etc/logrotate.d/apache2
/var/log/apache2/*.log {
    weekly
    missingok
    rotate 52
    compress
    delaycompress
    notifempty
    create 640 root adm
    sharedscripts
    postrotate
        if [ -f "`. /etc/apache2/envvars ; echo ${APACHE_PID_FILE:-
/var/run/apache2.pid}`" ]; then
            /etc/init.d/apache2 reload > /dev/null
        fi
    endscript
}
```

```
/var/log/httpd/*log {
    missingok
    notifempty
    sharedscripts
    postrotate
        /sbin/service httpd reload > /dev/null 2>/dev/null || true
    endscript
}
```

### 2.2. mysql

```
$ cat /etc/logrotate.d/mysql-server
# - I put everything in one block and added sharedscripts, so that mysql gets
#   flush-logs'd only once.
#   Else the binary logs would automatically increase by n times every day.
# - The error log is obsolete, messages go to syslog now.
/var/log/mysql.log /var/log/mysql/mysql.log /var/log/mysql/mysql-slow.log {
    daily
    rotate 7
    missingok
    create 640 mysql adm
    compress
    sharedscripts
    postrotate
        test -x /usr/bin/mysqladmin || exit 0
        # If this fails, check debian.conf!
        MYADMIN="/usr/bin/mysqladmin --defaults-
file=/etc/mysql/debian.cnf"
        if [ -z "$MYADMIN ping 2>/dev/null`" ]; then
            # Really no mysqld or rather a missing debian-sys-maint user?
            # If this occurs and is not a error please report a bug.
            #if ps cax | grep -q mysqld; then
            if killall -q -s0 -umysql mysqld; then
                exit 1
            fi
        else
```

```
                $MYADMIN flush-logs
            fi
        endscript
    }
```

### 2.3. cacti

```
/var/log/cacti/*.log {
    weekly
    missingok
    rotate 52
    compress
    notifempty
    create 640 www-data www-data
    sharedscripts
}
```

# 第 16 章 Service

## 目录

- [1. update-rc.d - install and remove System-V style init script links](#)
- [2. invoke-rc.d - executes System-V style init script actions](#)
- [3. runlevel](#)
- [4. sysv-rc-conf](#)
- [5. xinetd - replacement for inetd with many enhancements](#)

- [5.1. tftpd](#)

- [6. Scheduled Tasks](#)

- [6.1. crontab - maintain crontab files for individual users](#)
  - [6.2. at, batch, atq, atrm - queue, examine or delete jobs for later execution](#)

## 1. update-rc.d - install and remove System-V style init script links

for example:

```
Insert links using the defaults:
update-rc.d foobar defaults
Equivalent command using explicit argument sets:
update-rc.d foobar start 20 2 3 4 5 . stop 20 0 1 6 .
More typical command using explicit argument sets:
update-rc.d foobar start 30 2 3 4 5 . stop 70 0 1 6 .
Insert links at default runlevels when B requires A
update-rc.d script_for_A defaults 80 20
update-rc.d script_for_B defaults 90 10
Insert a link to a service that (presumably) will not be needed by any other
daemon
update-rc.d top_level_app defaults 98 02
Insert links for a script that requires services that start/stop at sequence
number 20
update-rc.d script_depends_on_svc20 defaults 21 19
Remove all links for a script (assuming foobar has been deleted already):
update-rc.d foobar remove
Example of disabling a service:
update-rc.d -f foobar remove
update-rc.d foobar stop 20 2 3 4 5 .
Example of a command for installing a system initialization-and-shutdown script:
update-rc.d foobar start 45 S . stop 31 0 6 .
Example of a command for disabling a system initialization-and-shutdown script:
update-rc.d -f foobar remove
update-rc.d foobar stop 45 S .
```

set default

```
update-rc.d nginx defaults
```

remove

```
update-rc.d -f lighttpd remove
$ sudo update-rc.d -f avahi-daemon remove
```

2. invoke-rc.d - executes System-V style init script actions

```
$ sudo invoke-rc.d mysql restart
```

### 3. runlevel

```
$ runlevel
N 2

# runlevel
N 3
```

```
$ sudo vim /etc/init.d/rcS
#!/bin/sh
#
# rcS
#
# Call all S??* scripts in /etc/rcS.d/ in numerical/alphabetical order
#

exec /etc/init.d/rc S
```

the default is S (/etc/rcS.d/)

the redhat linux in the /etc/inittab

switch runlevel

```
/etc/init.d/rc 3
```

## 4. sysv-rc-conf

(ubuntu 下 sysv-rc-conf 命令等同 redhat 下 chkconfig 命令)

```
sysv-rc-conf gmond on
sysv-rc-conf --list gmond
```

## 5. xinetd - replacement for inetd with many enhancements

```
$ sudo apt-get install xinetd
```

### 5.1. tftpd

```
apt-get install xinetd
apt-get install tftpd tftp
```

/etc/xinetd.d/tftp

```
service tftp
{
    disable=no
    socket_type=dgram
    protocol =udp
    wait=yes
    user=root
    server=/usr/sbin/in.tftpd
    server_args =-s /home/neo/tftpboot -c
    per_source=11
    cps=100 2
    flags=IPv4
}
```

## 6. Scheduled Tasks

### 6.1. crontab - maintain crontab files for individual users

To see what crontabs are currently running on your system, you can open a terminal and run:

```
$ crontab -l
# m h dom mon dow   command
#* */30 * * * /home/neo/dyndns
```

if you want to see root user, please add 'sudo' in the prefix.

To edit the list of cron jobs you can run:

```
$ crontab -e
```

As you can see there are 5 stars. The stars represent different date parts in the following order:

- 1. minute (from 0 to 59)
- 2. hour (from 0 to 23)
- 3. day of month (from 1 to 31)
- 4. month (from 1 to 12)
- 5. day of week (from 0 to 6) (0=Sunday)

By default cron jobs sends a email to the user account executing the cronjob. If this is not needed put the following command At the end of the cron job line .

```
>/dev/null 2>&1
```

### 6.2. at, batch, atq, atrm - queue, examine or delete jobs for later execution

access.2010-09-30.log  access.2010-10-10.log  access.2010-10-23.log  access.2010-11-04.log  access.2010-11-15.log  access.2010-11-24.log
access.2010-10-01.log  access.2010-10-12.log  access.2010-10-25.log  access.2010-11-05.log  access.2010-11-16.log  access.2010-11-25.log
# gzip access.2010-{0?,10,11}-???.log &
```

### 1.3. b2zip

b2zip

```
tar -jcvf foo.tar.bz2 foo/
    tar contents of folder foo in foo.tar.bz2

tar -jxvf foo.tar.bz2
    extract b2zip foo.tar.bz2
```

compress

compress/uncompress

```
tar -Zcvf foo.tar.Z foo/
    tar contents of folder foo in foo.tar.Z

tar -Zxvf foo.tar.Z
    extract compress foo.tar.Z
```

### 1.5. tar: Removing leading ‘/’ from member names

-P, --absolute-names don’t strip leading ‘/’s from file names

```
$ tar -czvPf neo.tar.gz /home/neo/

$ tar -xzvPf neo.tar.gz
```

### 1.6. -C, --directory=DIR

-C, --directory=DIR change to directory DIR

```
tar -xzvf neo.tar.gz -C /
```

### 1.7. --exclude

排除neo目录

```
tar --exclude /home/neo -zcvf myfile.tar.gz /home/* /etc
```

### 1.8. -T

```
find . -name "*.jpg" -print >list
tar -T list -czvf picture.tar.gz

find /etc/ | tar czvf xxxl.tar.gz -T -
```

### 1.9. 日期过滤

打包 2010/08/01 之后的文件和目录

```
tar -N '2010/08/01' -zcvf home.tar.gz /home
```

### 1.10. 保留权限

```
tar -zxvpf /tmp/etc.tar.gz /etc
```

### 1.11. -r, --append

追加最近7天更改过的文件

```
find / -type f -mtime -7 | xargs tar -rf weekly_incremental.tar
```

### 1.12. 远程传输

tar -jcpvf - file | ssh remote "tar -jxpvf -"

```
tar -jcpvf - file.php | ssh root@172.16.3.1 "tar -jxpvf -"
```

## 2. aptitude

管理软件包

```
neo@kerberos:~$ tasksel
neo@kerberos:~$ aptitude
```

### 3. Automatic Updates

```
sudo apt-get install unattended-upgrades
```

```
/etc/apt/apt.conf.d/50unattended-upgrades
```

Notifications

```
sudo apt-get install apticron
```

```
/etc/apicron/apicron.conf
```

```
EMAIL="root@example.com"
```

## 4. dpkg

### 4.1. Status

系统上装了哪些软件包

要查看 Debian 系统上安装的所有软件包的状态，运行

```
dpkg --list
```

输出每个软件包的一行简单介绍，2字符的状态标志，包名，所安装版本，和简要描述。

查看以 "foo" 开头的软件包的状态，执行：

```
dpkg --list 'foo*'
```

要得到某个软件包的更详细信息，执行：

```
dpkg --status packagename
```

List of installed software packages

```
$ dpkg-query -W
```

Description of installed software packages

```
$ dpkg -l
```

找出一个文件的归属包

```
dpkg --search cachemgr
squid3-cgi: /usr/lib/cgi-bin/cachemgr3.cgi
squid3-cgi: /usr/share/man/man8/cachemgr3.cgi.8.gz
squid3-cgi: /etc/squid3/cachemgr.conf
```

### 4.2. dpkg-reconfigure

```
$ sudo dpkg-reconfigure package
```

[Home](#) | [Mirror](#) | [Search](#)

## 5. Upgrading

升级到最新开发版

### 5.1. GUI

```
update-manager --devel-release
```

### 5.2. CLI

```
$ sudo do-release-upgrade
$ lsb_release -a
```

升级到最新开发版

```
vim /etc/update-manager/release-upgrades 文件，把里面的
Prompt=lts
改为
Prompt=normal
```

```
sudo do-release-upgrade -d
```

### 5.3. CDROM

```
$ sudo mount -t iso9660 -o loop ~/maverick-alternate-i386.iso /cdrom
$ sudo /cdrom/cdromupgrade
```

# 第 19 章 Directory and File System Related

## 目录

- [1. dirname](#)

  - [14.3. user](#)
  - [14.4. perm](#)
  - [14.5. type](#)
    - [14.5.1. 分别设置文件与目录的权限](#)
  - [14.6. -delete](#)
  - [14.7. exec](#)
  - [14.8. xargs](#)
  - [14.9. 排除目录](#)
  - [14.10. -mtime / -mmin](#)
  - [14.11. --newer](#)
  - [14.12. -print / -printf](#)

## 1. dirname

```
$ dirname /usr/bin/find
/usr/bin
```

[Home](#) | [Mirror](#) | [Search](#)

2. filename

```
$ basename /usr/bin/find
find
```

2.1. 排除扩展名

```
file=test.txt
b=${file%.*}
echo $b
```

```
$ for file in *.JPG;do mv $file ${file%.*}.jpg;done
```

2.2. 取扩展名

```
file=test.txt
b=${file##*.}
echo $b
```

3. test - check file types and compare values

```
test -x /usr/bin/munin-cron && /usr/bin/munin-cron
```

4. stat

modification time (mtime, 修改时间) : 当该文件的“内容数据”更改时, 会更新这个时间。内容数据指的是文件的内容, 而不是文件的属性。  
status time (ctime, 状态时间) : 当该文件的“状态 (status)”改变时, 就会更新这个时间, 举例, 更改了权限与属性, 就会更新这个时间。  
access time (atime, 存取时间) : 当“取用文件内容”时, 就会更新这个读取时间。举例来使用cat去读取该文件, 就会更新atime了。

```
[root@apache www]# stat index.html
  File: `index.html'
  Size: 145355          Blocks: 296          IO Block: 4096   regular file
Device: fd01h/64769d   Inode: 15861815      Links: 1
Access: (0755/-rwxr-xr-x)  Uid: ( 502/  upuser)   Gid: ( 502/  upuser)
Access: 2010-10-28 11:09:52.000000000 +0800
Modify: 2010-10-28 10:23:13.000000000 +0800
Change: 2010-10-28 10:23:13.000000000 +0800
```

## 5. mkdir - make directories

```
mkdir -p /tmp/test/{aaa,bbb,ccc,ddd}

mkdir -p /tmp/test/{aaa,bbb,ccc,ddd}/{eee,fff}

mkdir -p
/tmp/test/{2008,2009,2010,2011}/{01,02,03,04,05,06,07,08,09,10,11,12}/{1,2,3,4,5,6,7,8,9,10,
```

# 6. rename

批量更改扩展名

```
rename 's/\.png/\.PNG/' *.png

rename '/\.mp3/\.MP3/' *.mp3
rename .mp3 .MP3 *.mp3

rename GIF gif *.GIF
```

```
for file in *.GIF
do
    mv $file ${file%.*}.gif
done
```

7. touch

创建空文件，修改文件日期时间

```
touch [-acdm] 文件
参数:
-a : 仅修改access time。
-c : 仅修改时间，而不建立文件。
-d : 后面可以接日期，也可以使用 --date="日期或时间"
-m : 仅修改mtime。
-t : 后面可以接时间，格式为 [YYMMDDhhmm]

# touch filename
# touch -d 20050809 filename
# touch -t 0507150202 bashrc
# touch -d "2 days ago" bashrc
# touch --date "2011-06-03" filename
```

8. ls - list directory contents

```
$ ls
$ ls ~
$ ls -l
$ ls -a
$ ls -l
$ ls -F
bg7nyt.txt*  Desktop/      Firefox_wallpaper.png  Music/      public_html@  Videos/
bg7nyt.wav*  Documents/    Mail/                  nat.txt*    script/
workspace/
BOINC/       Examples@    mbox                   Pictures/   Templates/
```

`{}`通配符

```
ls {*.py,*.php,*.{sh,shell}}
```

take a look at below

```
alias l='ls -CF'
alias la='ls -A'
alias ll='ls -l'
alias ls='ls --color=auto'
```

## 9. cp - copy files and directories

### 9.1. copy directories recursively

```
cp -r /etc/* ~/myetc
```

### 9.2. overwrite an existing file

```
# alias cp
alias cp='cp -i'

# unalias cp
# alias cp
-bash: alias: cp: not found
```

## 10. rm - remove files or directories

10.1. -bash: /bin/rm: Argument list too long

```
ls -l | xargs rm -f
find . -name 'spam-*' | xargs rm
find . -exec rm {} \;

ls | xargs -n 10 rm -fr # 10个为一组
```

10.2. zsh: sure you want to delete all the files in /tmp [yn]?

```
yes | rm -i file
```

# 11. df - report file system disk space usage

```
neo@netkiller:~$ df -lh
Filesystem      Size  Used Avail Use% Mounted on
/dev/sda1        19G   3.1G   15G   17% /
none            996M  224K   996M    1% /dev
none            1000M    0 1000M    0% /dev/shm
none            1000M  520K 1000M    1% /var/run
none            1000M    0 1000M    0% /var/lock
none            1000M    0 1000M    0% /lib/init/rw
/dev/sda6        19G   13G   4.5G   75% /home
/dev/sda10       556M  178M  351M   34% /boot
/dev/sda7        46G   4.4G   40G   10% /var
/dev/sda8       367G   60G  289G   18% /opt
/dev/sda9        6.5G  143M   6.0G    3% /tmp
```

12. du - estimate file space usage

```
neo@netkiller:~$ sudo du -sh /usr/local
63M      /usr/local
```

### 13. tac - concatenate and print files in reverse

```
$ tac /etc/issue
Kernel \r on an \m
CentOS release 5.4 (Final)
```

[Home](#) | [Mirror](#) | [Search](#)

## 14. find - search for files in a directory hierarchy

### 14.1. name

Find every file under directory /usr ending in "stat".

```
$ find /usr -name *stat
/usr/src/linux-headers-2.6.24-22-generic/include/config/cpu/freq/stat
/usr/bin/lnstat
/usr/bin/sar.sysstat
/usr/bin/mpstat
/usr/bin/rtstat
/usr/bin/nstat
/usr/bin/lpstat
/usr/bin/ctstat
/usr/bin/stat
/usr/bin/kpsestat
/usr/bin/pidstat
/usr/bin/iostat
/usr/bin/vmstat
/usr/lib/sysstat
/usr/share/doc/sysstat
/usr/share/gnome/help/battstat
/usr/share/omf/battstat
/usr/share/zsh/help/stat
/usr/share/zsh/4.3.4/functions/Completion/Unix/_diffstat
/usr/share/zsh/4.3.4/functions/Completion/Zsh/_stat
/usr/share/zsh/4.3.4/functions/Zftp/zfstat
```

```
find \( -iname '*.jpg' -o -iname '*.png' -o -iname '*.gif' \)

find /www/images -type f \( -iname '*.js' -o -iname '*.css' -o -iname '*.html' \)
| xargs tar -czf ~/images.tgz
```

### 14.2. regex

```
find . -regex ".*\.(jpg|png)"
```

下面regex与name作用相同

```
find . -regex ".*\.(txt|sh)"
find . -name "*.sh" -o -name "*.txt"
```

### 14.3. user

Find every file under /home and /var/www owned by the user neo.

```
$ find /home -user neo
$ find /var/www -user neo
$ find . -user nobody -iname '*.php'
```

### 14.4. perm

```
find ./ -perm -7 -print | xargs chmod o-w
find . -perm -o=w
```

## 14.5. type

### 14.5.1. 分别设置文件与目录的权限

```
find /usr/www/phpmyadmin -type d -exec chmod 755 {} \;  
find /usr/www/phpmyadmin -type f -exec chmod 644 {} \;
```

## 14.6. -delete

```
# find /var/spool/clientmqueue/ -type f -delete
```

## 14.7. exec

替换文本

```
# find ./ -exec grep str1 '{}' \; -exec sed -i.bak s/str1/str2/g '{}' \;
```

```
find -exec ls -l {} \; | grep '2011-01-18'
```

## 14.8. xargs

```
find /etc -type f|xargs md5sum
```

```
find ./ -name "*.html" | xargs -n 1 sed -i -e 's/aaa/bbb/g'
```

```
find /tmp -name core -type f -print | xargs /bin/rm -f  
find . -type f -exec file '{}' \;
```

## 14.9. 排除目录

```
find /usr/local -path "/usr/local/share" -prune -o -print  
  
find /usr/local \( -path /usr/local/bin -o -path /usr/local/sbin \) -prune -o -print  
  
find /usr/local \( -path /usr/local/dir1 -o -path /usr/local/file1 \) -prune -o -name "temp" -print
```

查找当前目录下的php文件,排除子目录templates\_c, caches

```
find . \( -path ./templates_c -o -path ./caches \) -prune -o -name "*.php" -print
```

## 14.10. -mtime / -mmin

3天前

```
find . -type f -mtime -3
```

```
# find . -mmin +5 -mmin -10
```

例 19.1. backup(find + tar)

```
find / -type f -mtime -7 | xargs tar -rf weekly_incremental.tar
```

```
gzip weekly_incremental.tar
```

14.11. --newer

```
tar --newer="2011-07-04" -zcvf backup.tar.gz /var/www/  
tar cvzf foo.tgz /bak -N "2004-03-03 16:49:17"
```

14.12. -print / -printf

```
[root@scientific ~]# find / -maxdepth 1 -name '[!..]*' -printf 'Name: %16f Size: %6s\n'  
Name:           / Size:    4096  
Name:           misc Size:      0  
Name:           media Size:   4096  
Name:           home Size:   4096  
Name:           dev Size:   3840  
Name:           net Size:      0  
Name:           proc Size:      0  
Name:           sbin Size:  12288  
Name:           root Size:   4096  
Name:           lib Size:   4096  
Name:           cgroup Size:  4096  
Name:           srv Size:   4096  
Name:           mnt Size:   4096  
Name:           etc Size:  12288  
Name:           usr Size:   4096  
Name:           lib64 Size:  12288  
Name:           boot Size:   1024  
Name:           var Size:   4096  
Name:           selinux Size:    0  
Name:           opt Size:   4096  
Name:           tmp Size:   4096  
Name:    lost+found Size:  16384  
Name:           sys Size:      0  
Name:           bin Size:   4096  
  
# find /etc/ -type f -printf "%CY-%Cm-%Cd %Cr %8s %f\n"
```

[上一页](#)

13. tac - concatenate and print files in reverse

[上一级](#)

[起始页](#)

[下一页](#)

第 20 章 package / compress and decompress

## 2. cpio - copy files to and from archives

```
find /opt -print | cpio -o > opt.cpio
find . -type f -name '*.sh' -print | cpio -o | gzip >sh.cpio.gz
cpio -i < opt.cpio
```

3. zip, zipcloak, zipnote, zipsplit - package and compress (archive) files

\*.zip

zip/unzip file[.zip]

4. RAR

```
sudo apt-get install rar unrar
```

5. 7-Zip

<http://www.7-zip.org/>

```
$ sudo apt-get install p7zip
```

[Home](#) | [Mirror](#) | [Search](#)

# 第 21 章 Process

## 目录

- [1. top - display Linux tasks](#)
- [2. ps - report a snapshot of the current processes](#)
  - [2.1. ps axef](#)
  - [2.2. ps -eo pid.cmd](#)
  - [2.3. ps jax](#)
  - [2.4. zombie process](#)
- [3. mpstat](#)
- [4. pstree - display a tree of processes](#)
- [5. pid](#)
- [6. jobs](#)
  - [6.1. &](#)
  - [6.2. Ctrl + Z](#)
  - [6.3. jobs](#)
  - [6.4. fg / bg](#)
  - [6.5. nohup - run a command immune to hangups, with output to a non-tty](#)
- [7. ionice - get/set program io scheduling class and priority](#)

## 1. top - display Linux tasks

```
$ top
top - 22:30:02 up 14:24, 1 user, load average: 0.17, 0.15, 0.10

## 6. jobs

### 6.1. &

usage: command &

```
$ grep -r 'neo' / > result &  
[1] 10414
```

### 6.2. Ctrl + Z

```
vim  
  
$ vim  
[2]+  Stopped                  vim  
  
mutt  
  
$ mutt  
[3]+  Stopped                  mutt
```

### 6.3. jobs

```
$ jobs  
[1]  Running                  grep -r 'neo' / > result &  
[2]-  Stopped                  vim  
[3]+  Stopped                  mutt
```

### 6.4. fg / bg

usage: fg [job\_spec]

```
$ fg 2
```

usage: bg [job\_spec ...]

```
$ cp -r /usr/ /tmp/  
Ctrl + Z  
[1]+  Stopped                  cp -r /usr/ /tmp/  
  
$ bg  
[1]+ cp -r /usr/ /tmp/ &  
  
$ fg  
cp -r /usr/ /tmp/
```

### 6.5. nohup - run a command immune to hangups, with output to a non-tty

```
nohup command > myout.file 2>&1 &
nohup command >/dev/null 2>/dev/null &
nohup command &>/dev/null
```

You may using 'jobs' to display task.

and using 'fg %n' to close that.

7. ionice - get/set program io scheduling class and priority

```
EXAMPLES
# ionice -c3 -p89

Sets process with PID 89 as an idle io process.

# ionice -c2 -n0 bash

Runs 'bash' as a best-effort program with highest priority.

# ionice -p89

Returns the class and priority of the process with PID 89.
```

- [2.2. Add a user to the group](#)
- [2.3. /etc/group](#)

## 1. User

### 1.1. Add a new user

```
$ adduser neo
```

### 1.2. remove an existed user

remove an existed user, but keeping directory /home/neo

```
$ userdel neo
```

delete user's directory under /home when removing an existed user

```
$ userdel -r neo
```

### 1.3. usermod - modify a user account

```
usermod -G group -a user

[root@scientific ~]# groupadd vm
[root@scientific ~]# adduser xen
[root@scientific ~]# usermod -G vm -a xen
[root@scientific ~]# usermod -G vm -a kvm
[root@scientific ~]# id xen
uid=501(xen) gid=502(xen) groups=502(xen),501(vm)
```

### 1.4. lock / unlock

```
passwd -l neo
```

```
passwd -u neo
```

```
[root@test ~]# cat /etc/passwd

## 1. umask

```
[root@development ~]# umask
0022
[root@development ~]# umask -S
u=rwx,g=rx,o=rx
```

## 设置

```
umask 002
```

[Home](#) | [Mirror](#) | [Search](#)

Google™ Custom Search

## 2. Access Permissions

### 2.1. chown - change file owner and group

chown - change file owner and group

```
[root@test ~]# touch test
[root@test ~]# adduser neo
[root@test ~]# chown neo test
[root@test ~]# ll test
-rw-r--r-- 1 neo root 0 Apr 19 18:15 test
```

### 2.2. chgrp - change group ownership

chgrp - change group ownership

```
# chgrp daemon -R *

# ll
drwxrwxr-x 3 neo daemon 4096 Apr 16 18:23 user
```

### 2.3. chmod - change file access permissions

option

```
u = user
g = group
o = other
a = all
```

```
r = 4
w = 2
x = 1
```

```
[root@test ~]# ll test
-rwxr--r-- 1 neo root 0 Apr 19 18:15 test
[root@test ~]# chmod g=x test
[root@test ~]# ll test
-rwx--xr-- 1 neo root 0 Apr 19 18:15 test
[root@test ~]# chmod go+w test
[root@test ~]# ll test
-rwx-wxrw- 1 neo root 0 Apr 19 18:15 test
[root@test ~]# chmod u-wx test
[root@test ~]# ll test
-r---wxrw- 1 neo root 0 Apr 19 18:15 test
[root@test ~]# chmod u=rwx test
[root@test ~]# ll test
-rwx-wxrw- 1 neo root 0 Apr 19 18:15 test
[root@test ~]# chmod a=rwx test
[root@test ~]# ll test
-rwxrwxrwx 1 neo root 0 Apr 19 18:15 test
```

3. chattr - change file attributes on a Linux second extended file system

```
[root@development ~]# chattr +i /etc/passwd
[root@development ~]# lsattr /etc/passwd
----i----- /etc/passwd
```

```
[root@development ~]# chattr -i /etc/passwd
[root@development ~]# lsattr /etc/passwd
----- /etc/passwd
```

4. su - run a shell with substitute user and group IDs

Change the effective user id and group id to that of USER.

```
[neo@development ~]$ su - root
```

```
[neo@development ~]$ su root -c "rm -rf linux/"
```

4.1. sudo, sudoedit - execute a command as another user

```
debian:~# apt-get install sudo
```

/etc/sudoers

```
# /etc/sudoers
#
# This file MUST be edited with the 'visudo' command as root.
#
# See the man page for details on how to write a sudoers file.
#

Defaults                env_reset

# Host alias specification

# User alias specification

# Cmnd alias specification

# User privilege specification
root    ALL=(ALL) ALL

# Uncomment to allow members of group sudo to not need a password
# (Note that later entries override this, so you might need to move
# it further down)
%sudo  ALL=NOPASSWD: ALL
```

sudo group

```
neo@debian:/etc/mysql$ cat /etc/group | grep 'sudo'
sudo:x:27:neo
```

ubuntu NOPASSWD

```
%admin  ALL=(ALL)ALL
改为
%admin  ALL=(ALL) NOPASSWD: NOPASSWD: ALL
```

[Home](#) | [Mirror](#) | [Search](#)

## 5. ACL - Access Control List

```
$ sudo modprobe loop
$ dd if=/dev/zero of=file bs=1k count=100
$ sudo losetup /dev/loop0 file
$ sudo mkfs.ext3 /dev/loop0
$ sudo mkdir /mnt/loop
$ sudo mount -o rw,acl /dev/loop0 /mnt/loop/
$ sudo chown neo.neo -R /mnt/loop
$ cd /mnt/loop/
```

### 5.1. getfacl - get file access control lists

UGO

```
$ touch file
$ ls -l file
-rw-r--r-- 1 neo neo 0 2008-12-22 15:28 file
```

ACL

```
$ getfacl file
# file: file
# owner: neo
# group: neo
user::rw-
group::r--
other::r--
```

display the default access control list only

```
neo@netkiller:/mnt/loop$ getfacl dir
# file: dir
# owner: neo
# group: neo
user::rwx
group::r-x
other::r-x
default:user::rwx
default:user:svnroot:rw-
default:group::r-x
default:group:nagios:rw-
default:mask::rwx
default:other::r-x

neo@netkiller:/mnt/loop$ getfacl -d dir
# file: dir
# owner: neo
# group: neo
user::rwx
user:svnroot:rw-
group::r-x
group:nagios:rw-
mask::rwx
other::r-x
```

recurse into subdirectories

```
$ getfacl -R dir
# file: dir
```

```
# owner: neo
# group: neo
user::rwx
group::r-x
other::r-x
default:user::rwx
default:user:svnroot:rw-
default:group::r-x
default:group:nagios:rw-
default:mask::rwx
default:other::r-x

# file: dir/file1
# owner: neo
# group: neo
user::rw-
user:svnroot:rw-
group::r-x                #effective:r--
group:nagios:rw-
mask::rw-
other::r--
```

## 5.2. setfacl - set file access control lists

### 5.2.1. set

add a user svnroot to file

```
neo@netkiller:/mnt/loop$ setfacl -m u:svnroot:rw file
```

if you can see a '+' at last, it's succeeded

```
$ ls -l file
-rw-rw-r--+ 1 neo neo 0 2008-12-22 15:44 file
```

let me see acl.

```
neo@netkiller:/mnt/loop$ getfacl file
# file: file
# owner: neo
# group: neo
user::rw-
user:svnroot:rw-
group::r--
mask::rw-
other::r--
```

add a user cvsroot to file again

```
neo@netkiller:/mnt/loop$ setfacl -m u:cvsroot:rw file
neo@netkiller:/mnt/loop$ getfacl file
# file: file
# owner: neo
# group: neo
user::rw-
user:cvsroot:rw-
user:svnroot:rw-
group::r--
mask::rw-
other::r--
```

add a user and group for that

```
neo@netkiller:/mnt/loop$ setfacl -m u:gnum3d:rwx,g:nagios:r file
neo@netkiller:/mnt/loop$ getfacl file
# file: file
# owner: neo
# group: neo
user::rw-
user:gnum3d:rwx
```

```
user:cvsvroot:rw-
user:svnroot:rw-
group:r--
group:nagios:r--
mask::rwx
other:r--
```

modify the current ACL(s) of file(s)

```
neo@netkiller:/mnt/loop$ getfacl file
# file: file
# owner: neo
# group: neo
user::rw-
user:svnroot:rw-
group:r--
mask::rw-
other:r--

neo@netkiller:/mnt/loop$ setfacl -m u:svnroot:r-x file
neo@netkiller:/mnt/loop$ getfacl file
# file: file
# owner: neo
# group: neo
user::rw-
user:svnroot:r-x
group:r--
mask:r-x
other:r--
```

### 5.2.2. default

```
neo@netkiller:/mnt/loop$ setfacl -d -m u:svnroot:rw dir/
neo@netkiller:/mnt/loop$ getfacl dir/
# file: dir
# owner: neo
# group: neo
user::rwx
group:r-x
other:r-x
default:user::rwx
default:user:svnroot:rw-
default:group:r-x
default:mask::rwx
default:other:r-x

neo@netkiller:/mnt/loop$ setfacl -d -m g:nagios:rw dir/
neo@netkiller:/mnt/loop$ getfacl dir/
# file: dir
# owner: neo
# group: neo
user::rwx
group:r-x
other:r-x
default:user::rwx
default:user:svnroot:rw-
default:group:r-x
default:group:nagios:rw-
default:mask::rwx
default:other:r-x
```

the file1 will inherit acl by default.

```
neo@netkiller:/mnt/loop$ touch dir/file1
neo@netkiller:/mnt/loop$ getfacl dir/file1
# file: dir/file1
# owner: neo
# group: neo
user::rw-
user:svnroot:rw-
group:r-x
group:nagios:rw-
mask::rw-
other:r--
#effective:r--
```

---

### 5.2.3. remove

remove entries from the ACL(s) of file(s)

```
neo@netkiller:/mnt/loop$ setfacl -x u:cvsroot file
neo@netkiller:/mnt/loop$ setfacl -x g:nagios file
neo@netkiller:/mnt/loop$ getfacl file
# file: file
# owner: neo
# group: neo
user::rw-
user:gnum3d:rw-
user:svnroot:rw-
group::r--
mask::rw-
other::r--
```

remove all extended ACL entries

```
neo@netkiller:/mnt/loop$ setfacl -b file
neo@netkiller:/mnt/loop$ getfacl file
# file: file
# owner: neo
# group: neo
user::rw-
group::r--
other::r--
```

### 5.3. backup and restore

backup

```
$ getfacl -R dir > dir.acl
```

restore

```
$ setfacl --restore dir.acl
```

- [4. disable x window](#)

# 1. 取消开机启动画面

splash 改为 nosplash

```
sudo vim /boot/grub/menu.lst

title          Ubuntu 8.10, kernel 2.6.24-22-generic
root           (hd0,0)
kernel         /boot/vmlinuz-2.6.24-22-generic root=UUID=66320533-a53d-4740-b7f0-ed0c294802ea ro
quiet splash
initrd         /boot/initrd.img-2.6.24-22-generic
quiet
```

## 2. Automatic login

```
$ sudo vim gdm.conf-custom

[daemon]
AutomaticLoginEnable=true
AutomaticLogin=neo
TimedLogin=neo
```

## 3. fonts 字体

```
# mkdir -p /usr/share/fonts/zh_CN/TrueType/
# cp -r Fonts/* /usr/share/fonts/zh_CN/TrueType/
# chmod 644 /usr/share/fonts/zh_CN/TrueType/*
# cd /usr/share/fonts/zh_CN/TrueType/
# mkfontscale
# mkfontdir
# fc-cache /usr/share/fonts/zh_CN/TrueType/
```

## 4. disable x window

```
$ sudo chmod 600 /etc/init.d/gdm
```

# 第 27 章 X Terminal

## 目录

- [1. tsclient - Terminal Server Client supporting XDMCP, VNC and RDP](#)
  - [1.1. VNC](#)
  - [1.2. xdmcp](#)

- [4. TightVNC](#)

## 1. tsclient - Terminal Server Client supporting XDMCP, VNC and RDP

### 1.1. VNC

让tsclient支持vnc协议

```
sudo apt-get install xtightvncviewer
```

### 1.2. xdmcp

让tsclient支持xdmcp协议

```
sudo apt-get install xnest
```

## 2. vinagre - a remote desktop viewer for the GNOME Desktop

```
$ vinagre
```

### 3. rdesktop - A Remote Desktop Protocol client

<http://www.rdesktop.org/>

```
$ rdesktop -g 800x600 -d 16 yourdomain.com/ip address
```

下载 <http://www.cendio.se/files/thinlinc/seamlessrdp/seamlessrdp.zip>, 并解压到C盘根目录下, C:\seamlessrdp, 然后就登出;  
rdesktop -A -s "c:\seamlessrdp\seamlessrdpshell.exe C:\Program Files\Internet Explorer\iexplore.exe" 192.168.0.10:3389 -u administrator -p 123456  
即可打开IE

11:08:45 (8.53 KB/s) - `boinc_5.6.4_i686-pc-linux-gnu.sh' saved [3205541/3205541]
```

\$ chmod +x boinc\_5.6.4\_i686-pc-linux-gnu.sh\$ ./boinc\_5.6.4\_i686-pc-linux-gnu.sh

```
netkiller@Linux-server:~$ chmod +x boinc_5.6.4_i686-pc-linux-gnu.sh
netkiller@Linux-server:~$ ./boinc_5.6.4_i686-pc-linux-gnu.sh
use /home/netkiller/BOINC/run_manager to start BOINC
netkiller@Linux-server:~$ ls
BOINC  boinc_5.6.4_i686-pc-linux-gnu.sh  public_html  www
netkiller@Linux-server:~$ cd BOINC/
netkiller@Linux-server:~/BOINC$ ls
bininstall.sh  boincmgr          boincmgr.8x8.png  run_client
boinc          boincmgr.16x16.png  ca-bundle.crt     run_manager
boinc_cmd     boincmgr.32x32.png  locale
netkiller@Linux-server:~/BOINC$
```

### 添加项目

```
$ ./boinc --attach_project http://setiathome.berkeley.edu/3d996959b1f88df43048f87c3c0c999f
```

### 运行Boinc

./boinc -daemon -no\_gui\_rpc

1.1. rc.local

```
/home/neo/BOINC/run_client --daemon
```

[上一页](#)

第 30 章 Office

[起始页](#)

[下一页](#)

2. ubuntu apt-get 安装

## 2. ubuntu apt-get 安装

```
netkiller@shenzhen:~/BOINC$ apt-cache search boinc
boinc-app-seti - SETI@home application for the BOINC client
boinc-client - core client for the BOINC distributed computing infrastructure
boinc-dev - development files to build applications for BOINC projects
boinc-manager - GUI to control and monitor the BOINC core client
kboincspy - monitoring utility for the BOINC client
kboincspy-dev - development files for KBoincSpy plugins
netkiller@shenzhen:~/BOINC$

安装
netkiller@shenzhen:~/BOINC$ sudo apt-get install boinc-client

拷贝现有的account文件
netkiller@shenzhen:~/BOINC$ cp account_* /var/lib/boinc-client/

重新启动
netkiller@shenzhen:~/BOINC$ /etc/init.d/boinc-client restart
```

3. boinccmd

```
# ./boinccmd

usage: boinccmd [--host hostname] [--passwd passwd] command

Commands:
--lookup_account URL email passwd
--create_account URL email passwd name
--project_attach URL auth          attach to project
--join_acct_mgr URL name passwd    attach account manager
--quit_acct_mgr                    quit current account manager
--get_state                        show entire state
--get_results                      show results
--get_simple_gui_info              show status of projects and active results
--get_file_transfers              show file transfers
--get_project_status               show status of all attached projects
--get_disk_usage                  show disk usage
--get_proxy_settings
--get_messages [ seqno ]          show messages > seqno
--get_message_count               show largest message seqno
--get_host_info
--version, -V                     show core client version
--result url result_name op        job operation
    op = suspend | resume | abort | graphics_window | graphics_fullscreen
--project URL op                  project operation
    op = reset | detach | update | suspend | resume | nomorework | allowmorework
--file_transfer URL filename op    file transfer operation
    op = retry | abort
--set_run_mode mode duration       set run mode for given duration
    mode = always | auto | never
--set_gpu_mode mode duration       set GPU run mode for given duration
    mode = always | auto | never
--set_network_mode mode duration
--set_proxy_settings
--run_benchmarks
--read_global_prefs_override
--quit
--read_cc_config
--set_debts URL1 std1 ltd1 [URL2 std2 ltd2 ...]
--get_project_config URL
--get_project_config_poll
--network_available
--get_cc_status
```

3.1. attach\_project

添加计算项目

```
$ ./boinc --attach_project http://setiathome.berkeley.edu/
3d996959b1f88df43048f87c3c0c999f
$ ./boinc --attach_project www.worldcommunitygrid.org
dad152cf8f8fbdc52b04d4eeaa43e1ca
$ ./boinc --attach_project http://climateprediction.net/
4070a202cd5a559ec9d044cffc156fa4
$ ./boinc --attach_project http://einstein.phys.uwm.edu/
f9d5ee6d433a6949599f91dd7d9ceb8e
$ ./boinc --attach_project http://milkyway.cs.rpi.edu/milkyway/
f2fa96fb4f72df925cba92c34031768d
$ ./boinc --attach_project http://boinc.iaik.tugraz.at/sha1_coll_search/
0017d38d9c4a944caa8dad0b82b3f6a6
$ ./boinc --attach_project http://lhcathehome.cern.ch/lhcathehome/
132e3b1b159af3c36c98056f9197dd8a
$ ./boinc --attach_project http://boinc.bakerlab.org/rosetta/
6ed4722aa62a9df5dd341e0b3b77d812
```

```
./boinccmd --project_attach http://einstein.phys.uwm.edu/
f9d5ee6d433a6949599f91dd7d9ceb8e
./boinccmd --project_attach http://boinc.bakerlab.org/rosetta/
6ed4722aa62a9df5dd341e0b3b77d812
```

3.2. nomorework | allowmorework 禁止下载任务 / 允许下载任务

```
./boinccmd --project http://boinc.bakerlab.org/rosetta/ nomorework
./boinccmd --project http://milkyway.cs.rpi.edu/milkyway/ nomorework
./boinccmd --project http://einstein.phys.uwm.edu/ nomorework
./boinccmd --project http://setiathome.berkeley.edu/ nomorework
```

```
./boinccmd --project http://setiathome.berkeley.edu/ allowmorework
```

修订历史

修订 1.02009-11-01

- 这篇文档出自 《Netkiller Linux 手札》 的系统配置篇
- 考虑到 《Netkiller Linux 手札》 过于臃肿，故将ubuntu linux系统配置部分分离出来作为系统篇。而 《Netkiller Linux 手札》 专注于各种服务器的配置。
